Australian Environmental Auditors

Australian Environmental Auditors (AEA) is one of Australia's leading advanced environmental advisory services, contaminated land and landfill auditing organisations.

AEA conducts auditing in all states and territories with a committed team of EPA appointed/accredited auditors and technical support experts.

Our experienced professionals have been involved in hundreds of audits throughout the country.

We are proud to present clients with pragmatic, timely and cost-effective statutory and non-statutory auditing services.

We provide sensible and scientific environmental solutions to assist all of our stakeholders – regulators, industry, public and consultants – in protecting human health and the environment by maintaining compliance with legislation while pursuing sustainable development.

The AEA Difference

We specialise in advanced advisory services, particularly site contamination and landfill auditing. We have an established company structure with experienced technical, administrative and editing staff to provide in-house support for our appointed/accredited auditors. We have developed and refined procedures for the efficient delivery of audits.

We provide high level advisory services due to our strong background in contaminated site assessment, remediation and landfills. We do not compete with contaminated site consultants in assessment, design or remediation work.

Professional Services

We employ sound, experienced technical support staff who have a thorough understanding of the most recent regulatory legislation in their assigned jurisdictions, as well as having technical expertise in one or more science or engineering fields.

AEA follows an open communication approach and is readily available to discuss the progress and development of projects with its stakeholders from beginning to end.

Our strategically located offices ensure our ability to provide proficient service to clients right around Australia.

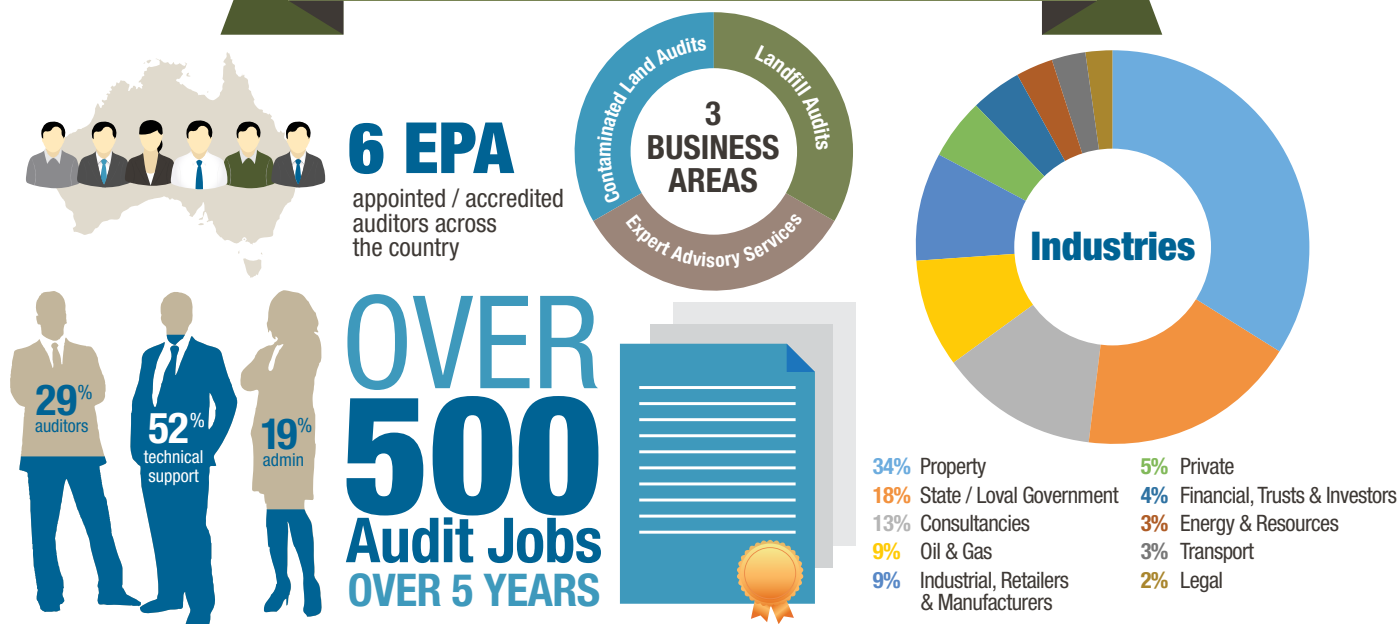

Industry Experience

AEA works for a variety of stakeholders and has had significant experience with virtually all types of contaminants in all types of industries, including:

- state and local government
- major multinational companies
- national industries and property developers
- service industry specialists – legal, consultants, engineers and planners
- local industry and property developers, and
- trusts and individuals.

AEA has a rich history of small to large scale work, and is able to cater to projects of any size.

Why Australian Environmental Auditors?

Contaminated Land Audits

Australian states and territories have developed legislation, regulations and guidelines for the management of contaminated sites in accordance with the Commonwealth framework.

This typically includes a requirement to undertake environmental audits on certain projects to meet the standards of the EPA or Council. These requirements are always changing and AEA's national coverage and professional responsibility as an auditor ensures we are on top of every change.

AEA's team of experienced auditors and technical support staff is able to provide independent assessment of sites to ensure the relevant conditions relating to the project's approval have been met.

Landfill Audits

The Best Practice Environmental Management (BPEM) Guidelines have changed the playing field for landfill compliance in Victoria, and AEA's experience has shown that other states, councils, independent owners and operators are also increasing their diligence in design, management and compliance with raising industry standards.

AEA's experienced auditors can assist with new, expanding, operational or closed landfill management issues, including advice as well as auditing services. AEA has one of Australia's foremost landfill gas experts available to clients, in-house.

Landfill Services include:

- Operations Audits
- Construction Design and QA audits
- Hydrogeological Assessments (HA) verification
- Monitoring Program (MP) verification
- Aftercare Management Plan (AMP) verification
- Risk Assessment (RA) review

Expert Advisory Services

AEA provides a number of special services to achieve a tailored outcome for clients in accordance with the relevant legislation and guidelines.

- Due Diligence
- Expert Witness
- Foremost Technical Support
 - Geology
 - Contaminant Hydrogeology
 - Fate and Transport Modelling
 - Landfill Gas and Soil Vapour
 - Remediation
 - Ecological Risk Assessment
 - Human Health Risk Assessment
